

### Obstetric Ultrasound

- 8-10 Weeks: Dating (FTS Blood Test)
- 12-13 Weeks: Nuchal Translucency
- 20 Weeks: Foetal Morphology
- 3rd Trimester: Foetal Wellbeing and Placenta

### Shoulder Ultrasound (One of the following must be queried )

- Evaluation of Tendon or Muscle
- Rotator Cuff - Tear, calcification, tendinosis
- Biceps Subluxation
- AC Joint
- Capsulitis/Bursitis
- Non Rebateable

### Knee Ultrasound (One of the following must be queried)

- Tendon or Bursa Abnormality
- Meniscal Cyst
- Popliteal Cyst
- Mass
- Nerve Entrapment/Tumour
- Collateral Ligament injury
- Non Rebateable

### Bone Mineral Densitometry

- Fracture from Minimal Trauma
- Previously Proven Low BMD
- Medical Condition Associated with Low BMD
- Over 70
- Non Rebateable

### GP Referred MRI Under 16

- Brain - for unexplained seizure, unexplained headache, or paranasal sinus pathology which has not responded to conservative treatment
- Spine - for significant trauma, unexplained pain with associated neurological signs or where significant pathology is suspected; only after routine xrays have been performed.
- Knee - for suspected internal joint derangement; only after routine xrays have been performed
- Hip - for suspected slipped capital femoral epiphysis, septic arthritis, Perthes Disease; only after routine xrays have been performed
- Elbow - for suspected significant fracture or avulsion injury that will change management; only after routine xrays have been performed
- Wrist - for suspected scaphoid fracture; only after routine xrays have been performed

### Adult MRI

- Brain - For unexplained prolonged headache or unexplained seizure
- Cervical Spine - with neurological symptoms
- Knee - to exclude meniscal tear with inability to extend knee, or where ACL tear is clinically indicated

### Mammogram
